

UNIVERSAL LCD MOUNTS

No good scoring upgrade is complete without a high-end LCD mount. Our PATENT-PENDING universal LCD mounting system uses the scoring systems original hanging cables making the process quick and painless. Installation time is less than 15 minutes for a single person to hang a lane pair, once the old system has been removed. Our LCD mounts are designed to seamlessly interface with the EVOLUTION upgrade, which will give a clean, sharp appearance to any center.

The EVOLUTION Digital Scoring Converter is the premier overhead scoring monitor upgrade for legacy scoring systems. Developed exclusively for the bowling industry, the EVOLUTION system works directly with the original scoring system and outputs standard HDMI digital video. This allows standard flat screen LCD TV's to be used as overhead scoring monitors instead of the original outdated, proprietary, and heavy CRT monitors. The EVOLUTION system gives bowling centers a bright new look that customers notice!

DIGITAL QUALITY

Digital video was used for one clear reason – it looks better! By converting the old analog video signals to digital, the EVOLUTION system can remove noise, sharpen the picture and apply colors to make your scoring system look better than when it was new. Digital video also eliminates the need to make adjustments to keep your system looking good – it's perfectly centered and the right color...always.

HAPPY CUSTOMERS

Bowlers come to your center to do one thing...BOWL! Let them focus on their game by presenting their scores in bright, vivid colors that only an LCD monitor can display. Your customers already know how to use your scoring system. Give them the look of new scoring without the hassles of learning a new system. Your customers will thank you!

LOWER COSTS

The EVOLUTION system is amazingly affordable, but when you consider the long-term benefits, it pays for itself. The system was designed to replace ALL the overhead components in most scoring systems. Less parts means less parts to break, which result in lower maintenance costs and less downtime. LCD monitors draw much less power than CRT monitors and have a longer life expectancy, which means lower operating expenses.

FUTURE OPTIONS

Upgrade one step at a time...and when you have money. Each upgrade in the EVOLUTION series is designed to make a big impact, something your customers will notice, which will let it pay for itself. When you're finally ready to make the plunge into new scoring, your LCD overheads will work perfectly with that too.

EVOLUTION Legacy Scoring Upgrades are ideal for:

- *Existing legacy scoring owners* — give your center a modern look, lower costs, and reduce maintenance.
- *Centers without automatic scoring* — attract new customers with a modern appearance at an affordable price.
- *New centers* — just because your center is new doesn't mean your scoring has to be. All the convenience without all the cost.
- *Home installations* — give your home install customers a modern look at an attractive price point.
